

Sylvan Hills — 4-Week Roadmap

Four-week plan to turn Garrett's existing daily-brief cron into a full Instagram-led brand operations stack. Builds on `sylvan-hills-daily-brief` (Sebastian, 2pm PT, already running) rather than restarting from zero.

Context (what we already have)

- Drive folder: ``1Czsj7LOeFEwr1DaZvw93yls-jG-2YN1x``
- GitHub: ``gbauto/sylvan-hills``
- Daily brief cron: ``sylvan-hills-daily-brief`` running on Mac Mini via OpenClaw, 2pm PT
- Onboarding deck: shipped 2026-04-05
- Garrett uses Claude Co-Work daily — high-context, systems-first client

Week 1 (4/28 – 5/4): Instagram Intel Agent

Goal: Replace the manual-feel parts of the daily brief with a real IG intel pipeline.

- Stand up ``sylvan-intel`` agent on Mac Mini (separate from the daily-brief cron so each can fail independently)
- Competitor watchlist: 8–12 menswear brands (Garrett picks during 60-min build session)
- Capture per brand: post cadence, top-3 posts by engagement, caption tone, hashtag set
- Trending aesthetic detector — image embeddings on saved competitor posts, weekly cluster report
- Output: extends the existing 2pm brief with an "IG Intel" section instead of a separate deliverable

Done when: Daily brief includes a 5-bullet competitor intel block sourced from real scraped data, not Garrett's manual scan.

Week 2 (5/5 – 5/11): Content Operations

Goal: Take the intel from Week 1 and turn it into draftable content, not just a report.

- Caption variant generator — for each planned Sylvan Hills post, draft 3 caption variants in brand voice ("garments for the man who has nothing to prove")
- Hashtag research agent — pulls from competitor hashtag sets + IG search, scores by reach/relevance
- Posting calendar in Drive — Garrett-editable, agent-suggested, never auto-posted
- Brand voice guard: lint pass on every draft against tone references in his Drive folder

Done when: Garrett opens the calendar Friday afternoon, sees next week's posts pre-drafted with hashtags, edits and approves.

Week 3 (5/12 – 5/18): Audience & DM Operations

Goal: Stop losing IG DMs and follower signal.

- DM triage agent — pulls IG DMs (manual export → Drive folder, or via Meta Graph if approved), categorizes (purchase intent, collab pitch, fan, spam), drafts responses
- Follower segmentation — engagement-based cohorts (active fans, lapsed, lookalike of high-LTV customers)
- Weekly audience report bundled into Sunday brief

Done when: Garrett reviews a Monday DM digest with drafted replies he can edit-and-send in under 15 minutes.

Week 4 (5/19 – 5/25): Integration + Sylvan Hills Second Brain

Goal: Everything talks. Sylvan Hills has a real second brain on the Mac Mini, not just a folder.

- Stand up `~/repos/sylvan-hills/second-brain/` matching the standard structure (agents/, contacts/, intelligence/, workflows/, tasks/)
- Add Sylvan Hills to `graphify-sync` rotation — daily knowledge graph of all client artifacts
- Wire intel → content → DM agents to share context via the second brain (so the caption generator knows what trending aesthetic the intel agent flagged that morning)
- 30-min handoff session: Garrett operates the system end-to-end with Greg watching

Done when: Garrett can ask the brief agent "what should I post this week" and get an answer that incorporates competitor intel, his own posting cadence, and audience signal — all from one source of truth.

Out of scope (parking lot)

- Auto-posting to IG (legal/brand risk — keep human-in-the-loop)
- Paid ads automation (separate engagement)
- E-commerce / Shopify integration (revisit once Sylvanhills.co traffic source data is in)
- Email marketing (no list size shared yet)

Cadence

- Async via Drive comments + Discord (TBD per `workflows/client-onboarding.md` step 8)
- Weekly 60-min build session on the cadence Garrett picks at the upcoming check-in call
- Daily Sebastian brief continues unchanged through the rollout

Open questions for the check-in call

1. Which 8–12 brands go on the competitor watchlist?
2. Are IG DMs accessible to Garrett via export, or does he need Meta Graph API approval (~2 weeks)?
3. Cadence preference for the 60-min sessions — weekly, biweekly, ad-hoc?
4. Any Sylvanhills.co work in scope, or strictly IG for these four weeks?
